RANGER SUPER DUTY

AVAILABLE FROM MARCH 2026

The Ford Ranger Super Duty is a new version of the Ranger designed for heavy-duty use, offering much higher towing and payload capacities. It's designed for customers who need a mid-size truck with substantial capability, such as emergency service operators, utilities and the military.

Super Duty is a badge only awarded by Ford to their toughest vehicles. It's been developed by professionals, for professionals, from deep engagement with heavy duty sectors.

JET FUEL

Ford have strengthened the drivetrain and armoured the underbody, given it a wider stance and a much greater range.

The unique frame has been engineered for increased strength, performance, and load-carrying capacity. This includes a thicker frame, reinforced suspension mounts, and stronger driveshafts. Together, these upgrades give extensive capability in a compact package that typically only larger truck-based vehicles can achieve.

**We've tested it to extremes
for durability and strength.**

For Modifiers, the reinforced frame and readily accessible mounting points make it easy to integrate a variety of modifications, aftermarket accessories and specialized equipment.
